Fidgit: An ungodly union of GitHub and figshare

Arfon M Smith

14 February 2016

Summary

This is a proof of concept integration between a GitHub (GitHub 2008) repo and figshare (figshare 2016) in an effort to get a DOI for a GitHub repository. When a repository is tagged for release on GitHub, Fidgit will import the release into figshare thus giving the code bundle a DOI. In a somewhat meta fashion, Fidgit is publishing itself to figshare. Its DOI is http://dx.doi.org/10.6084/m9.figshare.828487.
